

الوحدة التناسبية (المديول) كنظام إبداعي لتصميمات أقمشة السهرة للسيدات  
**The Module As a Creative System to Design Ladies' Evening Fabrics.**

أ. د/ مایسة فكري أحمد السيد

أستاذ التصميم المتفرغ بقسم - طباعة المنسوجات والصبغة والتجهيز - كلية الفنون التطبيقية - جامعة حلوان

أ. د/ هبة مصطفى محمد حسين

أستاذ أساسيات التصميم بقسم - طباعة المنسوجات والصبغة والتجهيز - كلية الفنون التطبيقية - جامعة حلوان

أ.د/ أشرف حسين إبراهيم

أستاذ التصميم بقسم التصميم الداخلي والاثاث- كلية الفنون التطبيقية - جامعة حلوان

م.م/ريهام محمد عبد السلام

المدرس المساعد بقسم - طباعة المنسوجات والصبغة والتجهيز - كلية الفنون التطبيقية - جامعة حلوان

**Abstract:**

With the beginning of the 20th century, scientific progress has a direct impact on all Fields, especially the field of fine art, so the artwork has become a field to practice everything new, and appearance of modern art schools with their artistic and aesthetic styles, but those aesthetic and artistic concepts were quickly renewed by the appearance of the (Chaos Theory) and its application on Visual art, It was possible to obtain technical amazing results which hide a beautiful random organized sensational made it a new way to develop world art, One of the most important design systems in which this theory depends on is "module" as the system's unit of artwork; Based on mathematical systems and geometric foundations that follow very precise laws that helped to detect aesthetic proportions and proportions of geometric shapes and systems, showing The full connection between all of them in the formation of creative designs based on the geometric organization in the distribution of the elements of design and their repetition within the artistic surface in the form of pattern or color sequences formed a new meaning of creative concepts in the artistic composition.

This theory helped the designers to realize that systems in nature hides a lot of the stunts that help to get a permanent regeneration aesthetics, and by applying it, it has been possible to organize randomness in art, so the designer has to combine both of module and repetitions through the chaos theory and choose one the geometrical Division of areas in line with the artistic design through an applied module system to get ideas for patterns innovative design based on the replication and distribution of elements within the design area with the aim of reaching new rules in the design structure with freedom of controlling Traditional ways, and module designs have an artistic values that reflect the spirit of modern art and fit as designs for ladies' evening fabrics in modern print styles.
