#### Abstract:

What we see from the natural balance and imbalance which is due to human activity and perhaps most aspects of this breach of the hole in the ozone layer which affect human and animal and plant and the Elimination of natural areas , As The weakness of the construction law and the absence of modern standards adopted mainly on principles and standards formulated by the urban and architectural heritage of the city, has had a negative impact on the environment and on modern architecture and adopted the integration Among the new inherited randomly and spontaneously. This has resulted in a lot of distortions and almost becomes ugly building shape attribute (blocks and architectural elements and decorative), but steadily growing awareness of the importance of taking advantage of the architectural heritage in some people and intellectuals and architects produced modern architecture inspired by certain values and architectural foundations Sanaa architecture model (historic), and this trend has touched the signs of hope in the correct path to understand the basis of their base, slipped Sanaa city of its walls and demolished large parts of them while off movement urbanization and population of the ring which was constrained by centuries, stretched outside the walls at the expense of city style The old new areas where governmental and industrial and residential facilities and educational, but endowed with national and international efforts to protect the ancient city of Sana'a and recorded within the world heritage protection.
