

Appearances of effect and being affected between the Islamic and Chinese civilizations

Dr./Osama Abd el-salam Mohamed Mansour

History and civilization teacher at faculty of Arabic studies –Ningheshyauniversity-China.

Introduction;

Ancient world knew different civilizations, where they had different relations some were friendly others were destructive and hostile fighting over leadership or survival. But relation between Arabic and Chinese civilizations remains with special and different style. Along its history it was characterized with being friendly and flawless free from fighting or differences which made it unique example of relations between nations.

Trading was one of the most important way of exchanging civilizations effects where trade was and still the passage that carried the civilizations examples and special human relation among different countries and prepared for more interactions, trading also played major role in development of geography and seas science and exploring the countries and determining their borders, resources, products, habits and traditions.

Also it had role in finding other forms of human relations like merchant settlements and stabilization at the countries they visited and marrying the natives which produced exchangeable effects at most aspects of life whether at the economic or social or political or civilizational sides.

That whole image was manifested in the relation between Arabic countries and China, where trade was the main factor in knowing each other. The arrival of Arabian merchants to China happened along time ago at the ancient history where the relation at its first stage was based on exchanging items then developed to exchanging interests then exchanging cultures and ideas that transformed into exchanging whole civilizational effects especially when the borders of the two nations was converged .

I will pursuit to accentuate the mutual effects between the Islamic Arabic civilization and the Chinese civilization at different aspects of life at this research.
