

Documents of Dawoodpasha son of Abd El-rahman halt structure in holy Mecca  
(Architectural archaeological investigation and study)

Dr/Mohamed Hamdy Metwally

Teacher of Islamic archaeology –Aswan university.

Introduction;

There is no doubt that one of the reliable historical resources are the halt structure contracts as it contains important information about the owner and the building with architectural description of it. Its importance is arising from the interest of the higher social standards of Islamic society as the owner is always one of pashas of ottoman state. And his belonging building is in Mecca which he has left to be exploited for the sake of Muslims as a proof to the importance of helping poor and needy as a way of good deeds that keep them closer to Allah. And their stress on following the steps of Mohamed the prophet and his companions after him.

The halt structure contract has included several types of buildings, the one in Mecca has school, store, two homes, two kiosks, seat, kitchen and purifier at holy Mecca .

I was keen to publish this document and what it includes from architectural buildings through geometrical plans to revitalize those buildings.

And the signature of those archaeological buildings on holy Mecca map. As I was keen on explaining many words that was in the contract as well as historical and archaeological expressions hoping that I could add new information about this halt structure.
