archeology- Al Fayoum university

Dr. Rania Abd El-Aziz

Lecturer at ancient Egyptian monuments department- faculty of archeology- Al
Fayoum university

Ahmed Kamal Oraby

Monuments inspector at the pyramids monuments area- ministry of archeology.

Introduction;

The goddess Shentyt is considered one of the ancient Egyptian goddess that wasn't known greatly in the community of the Egyptian gods, the subject of this research is aiming to uncover the titles and expressions that are relevant to the goddess and trying to explain them and show their importance throughout the history till the end of the Greek and the Romanian ages, the titles were shown with the intention of finding a clear explanation to those titles and linguistic expressions from the perspective of the ancient Egyptian beliefs which were mentioned through the resources and the monumental evidences to show it's touched and significant role in the ancient Egyptian civilization.

It is worth pointing to the debate that is still existing about the origin of deriving the word Shentyt, from 2 scripts at Dandara temple she was written as (Sntyt Sn i3wt n dmD) Shentyt that surrounds the hills , (Sntyt Sn i3wt n t3) Shentyt that surrounds the earth's hills, those two scripts confirm that the name was derived from the verb Sni which means surround, but Sn also means protect by surrounding, also Sni means suffers so it means the one who suffers, so she is an image of the goddess Isis and her grief over her lost husband Osiris , so the name Shentyt is a simple general name describes a widow.
