Research summary;

Photography is important and essential pillar in documenting and observation heritage of different civilizations with it's all contents to become witness on different ages to those eras. As the technological and scientific revolution has served us new dimentions that were able to be used in expansion of those ways so photography allowed us the possibility in recording events in such ease and simplicity also being able to send it via satellite at the same moment. With the development in photography technology and appearance of three dimentional stereophonic photography that enriched the process of documenting the heritage of different civilizations by transferring the witness as if he is inside the monumental collectibles with the possibility of wandering inside those milestones as if they are true which lead to preserving the different collectibles and ease the ways of restorations ,making the civilized cultural exchange between different people is simple
