Abstract:

The research investigates the interior architecture factors we need to take into consideration when we design for the rehabilitation processes of heritage spaces. There are many architectural, social, cultural, and civilized aspects involved in this handling. The accurate interior architecture design can be responsible for the values of individuals, associations, and societies which have a remarkable link with heritage spaces. Interior architecture design plays essential role through its impacts of the artistic, architectural and innovation capabilities. The research will explain the importance of using the suitable material that matches the nature of spaces. The research will explain the importance of compromising between the climatic, environmental, social and cultural considerations, and the goals of the reused adaptation in addition to what we need to consider when we utilize modern technology
