### Abstract:

Application of the Holistic in architecture and interior design

All the requirements for implementing the total theory are reviewed with an architectural view, and also the most important needs of the designer and user of architectural spaces from the point of view of the holistic theory.

- The Holistic of architectural design is tested by designing (space - building - containment) through: Organized style Relationships between blanks and some of them, Clarity of all parts of the design.
- The success of the holistic theory: Facilitating approach and entry permits and the space is designed light, vision, touch, hearing, and smell.
- The determinants of the Holistic in design achieved by technology, Structure and Containment.
- Health, Safety and Welfare
- Geographical environment to achieve the holistic theory (the location).
- Achieving systems: Physical, Cognitive, Moral systems.

**(After completing all the requirements of the holistic theory test for architectural design internally and externally, it can be called (Architectural holistic Design, Kidney Architectural Design, and theory Interior Design).**

The objectives of the overall design in architecture and interior design Able to Accessible, Safe Security Objectives, Merging the functional, Cost Effective, Assembly of units, the module and Utilitarian loss.

- Improving the quality of the environment: Externally and Internally
- Function Functional career goals
- Sustainable goals: including the highest quality for (Environment - Economy - Economy - Society Society).
- Productive goals
- Historic goals are concerned with works that are within a historical area.
