Abstract

The miraculous human body stands in front of humanity, and cannot fully comprehend it until now and is aware of all its capabilities and capabilities, and only attempts to explain it.

This research deals with the individual's electromagnetic field and how it is affected by the surrounding fields and plastic forms, and the role of this in influencing the brain, and how this is reflected and translated into the feeling that affects the effectiveness of the individual and his mental and physical health.

Research problem:

The lack of awareness by many of the importance of art, and its role in influencing the individual directly and indirectly and limiting the role of art to the artist's expression of personal emotion with him, and his employment in what dictates his personal emotion, places the major challenge. In addition to that, electromagnetic pollution, and its effect on the disturbance of the magnetic field surrounding the individual, which affects the human psyche and energy greatly, and also results in several damages that affect human health, behavior and psychological disorder.

Objectives:

- Explaining the effect of electromagnetic energy on the individual, and how this affects his psychological and physical health.
- Clarify the impact of the plastic formation on the individual and how the person is affected by the plastic form.

Research Impact:

- Clarifying the importance of the plastic formation, as it is an influential value, and has an effective impact on the health and psyche of the individual, which is reflected on his performance and production.
- Clarifying how the shape and the formation vocabulary surrounding the individual affect the electromagnetic field surrounding the person, and thus the interactions of the brain and the feelings resulting from this interaction.

Research methodology:

The study relied on the descriptive-analytical approach in answering the previous questions, and discerning its problems, by presenting and analyzing how to communication occur between the brain and the electromagnetic field of the individual and his feelings.

Key words:

Electromagnetic field - nervous system and neurons - neurotransmitters - feeling - modulating elements.
