### **Abstract**

Caring for the elderly has a great importance in society, and the state seeks to treat the problems of the elderly in various aspects, so the research deals with luminous materials, dyes and pastes because of their huge potential for application in the field of graphic design to support ambient lighting in different light and dark environments, which leads to protection for the elderly. These advantages in the properties of luminous dyes not only improve the aesthetic appearance of textiles when applied in homes for the elderly, but also increase the functional value of creativity in the print design of hanging fabrics inspired by folklore by helping the elderly to clearly guide the way in the dark, which helps not to Feeling of fear and maintaining their safety when they are in the corridors or rooms. The importance of the research is summarized in the use of luminous dyes and pastes to obtain new and distinct artistic and functional formulations for hanging fabrics, as well as shedding light on the folk heritage as a creative source and a stimulus for innovation based on originality, excellence and contemporary. From the psychological connection they have with everything that is old.
